Mihir Mistry Ethics Reflection:

As an engineering student at Iowa State University, I have learned that ethics is a very important part of making decisions in the workplace. Engineering isn't just about solving technical problems, but also about understanding how the solutions you choose affect people and society. Sometimes, engineers face situations where a decision benefits a company but could negatively affect the public or the environment. Situations like this can make it hard to determine what the best action is. I believe that engineers have a responsibility to be honest, take public safety as a priority, and be responsible for what they do. As I enter the workforce as an engineers, I want to make decisions that are based on those values even when things get hard. I know that ethical decisions may not always be straight forward, but I will strive to consider the consequences of my actions and make choices that I can stand behind.
